Unipro 3004

Unipro 3004 – the basic Laptimer

3004 is a good choice for drivers who want top quality and design together with a quick overview of the most basic information.

Precision, quality and design

The Unipro 3004 offers exactly the same high precision, quality and design as the larger models.

With 3004 you can get access to lap times, high and low values for engine revolutions and speed.

It is possible to save up to 175 laps and the 3004 also gives you access to engine timers and tire counters.

Features

Two-Way System	There is only one cable going to the steering wheel. This ensures a sturdy connection and reliable operation.
Thin Aluminium Casing	This elegant and durable display casing is just 15 millimetres and made of high quality aluminium.
Easy to Operate	With the single row display you can very easily overview your results. The large function buttons make it easy to scroll through the stored information.
Accurate RPM Calculation	Unipro Laptimers use the most advanced measuring system available. While many other systems measure engine revolutions as an average over several metres, Unipro calculates with an accuracy of approximately 15 cm.
Speed measurement	The Speed Kit shows your speed and is very easy to install.
Your Choice of Receiver Type	Choose between loop, magnet and IR receiver.

Unipro 3004 Kit Options

Laptimer 3004 Basic kit	Includes active RPM sensor and optional receiver (loop, magnet or IR).
Laptimer 3004 Speed kit	Includes active RPM sensor, speed kit and optional receiver.
