

Choosing the Flexibility

Prodezine axles are the most essential tuning tools for your chassis. When choosing the flexibility be sure to keep in mind that generally softer axles will 'loosen' up the kart, reduce 'bogging' out of the turns and overcome the increasing track grip. Harder axles will grip the kart up more.

Diameter: 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 30-35kg

Diameter: 40mm & 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 30-35kg

Diameter: 40mm & 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 35-40kg

Diameter: 50mm
Length: 1040mm
Flex Test Rating: 40-45kg

Diameter: 40mm & 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 48-55kg

Diameter: 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 58-65kg

Diameter: 40mm & 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 65-70kg

Diameter: 40mm & 50mm
Length: 1020mm & 1040mm
Flex Test Rating: 85-90kg

Choosing the Length

A shorter axle generally allows the kart to 'roll' slightly side to side, making it nippier through chicanes and corners with a change of direction combination.

A longer axle generally increases the lateral stability of the kart, improving 'side bite' grip mid-corner and on sweeping turns.
